

Insecurity:

The Alarming Costs of Data Breaches
in the Homeowner Space

What will you say
when a board
member asks you...

- Who has access to our financial data?
- How does cash flow get transferred after payments are processed?
- What do you do to keep our data safe?

Not sure what the
answer is? Read on:

THE RISK

Cybercrime damages are predicted to cost the world \$6 trillion by 2021. A data breach doesn't just cost you money — it costs you the financial security of every homeowner in your neighborhood. This leads to lost customers, a burdened reputation, and future profit loss.

THE OPPORTUNITY

When your software is verified for its safety and security — and when you know who within the your software's company has access to your data and cash — you stand out against your competitors with a best-in-class model that keeps homeowner safety top of mind.

THE SOLUTION:

CINC Systems is a Vericode-verified SaaS-based solution that ensures data and cash flow are safe from cybercrime by focusing on the product, the environment, and company policy and procedures.
